

**Floor Plan One**

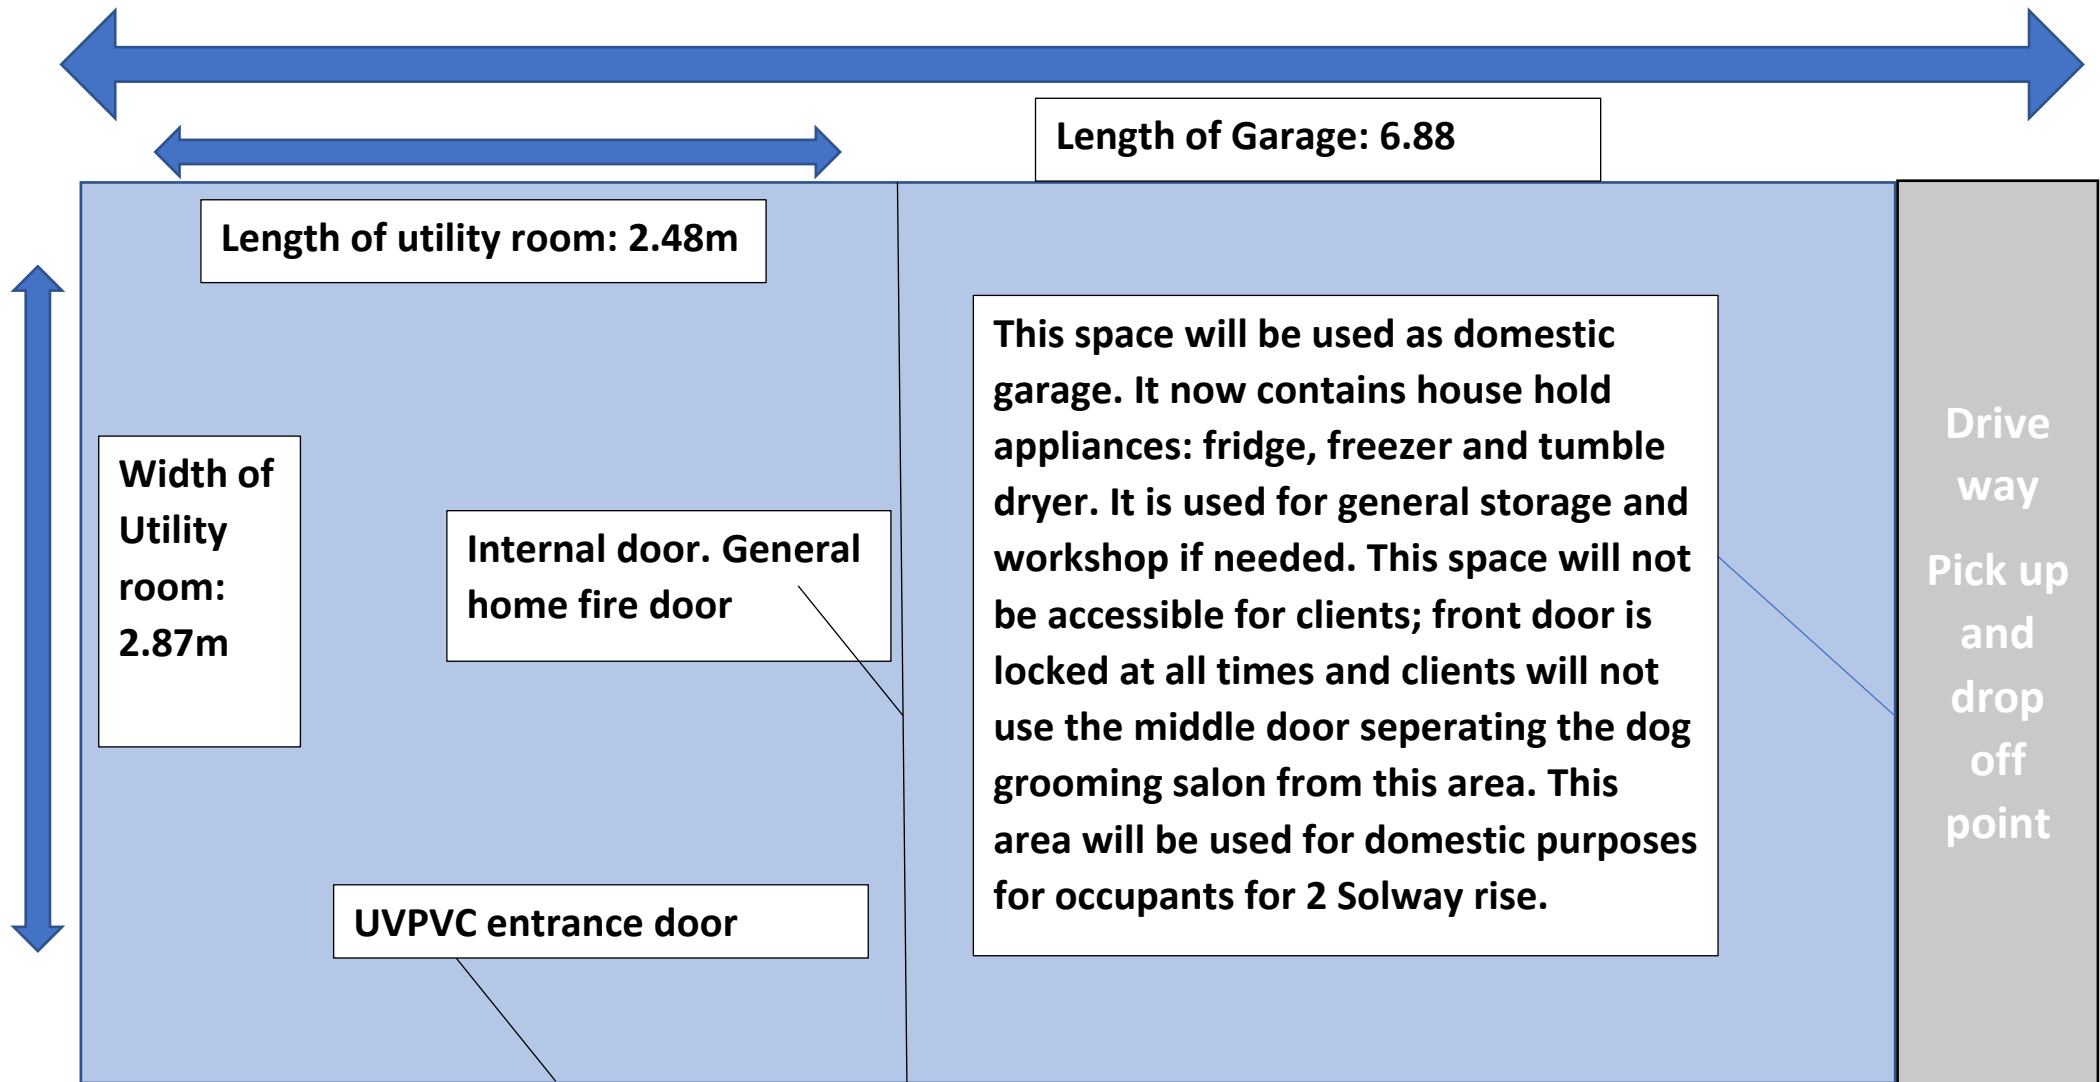

**Floor plan one demonstrates the entrance points into 2 Solway rise. I propose that the clients for Katie's Pampered pooches will have a drop off and pick up point within the front garden (or front porch of the house depending on the weather) or on the drive way. This is influenced by whether clients are using transport or walking. Times will be arranged prior for pick up and drop off times and will be for a minimal time.**

**I have acknowledged that clients may want to see my place of work for the reassurance that their dog's are going to be within a safe environment and therefore upon the initial meet and greet I will arrange a suitable time for clients to come through the front gate along the grey area, into the fenced back garden. The boundary area is fully secure and has to be for my own dogs. There is a UVPC lockable door on the side of the garage. This door is used as the main entrance door to the garage; the garage door located at the front on the drive is locked at all times and very rarely used because we have the side door.**

**There are no windows within the garage. There is a house fire door which separates the utility room from the front of the garage.**

## Floor Plan Two: Internal floor plans for detached garage and utility room

**Outside of the entrance door to the dog grooming room.**

**Converted utility room to dog grooming room.  
Decorating has been completed and some  
equipment/storage has been added.**

**Internal door which separates the room from the domestic garage. This is a fire door similar to the ones in the home.**
