
DIMENSIONS:

We propose installing a 33m system which is within the limits set out by England & Wales Cricket Board Approved Non-Turf Pitch Codes of Practice.

LOCAL FEATURES:

The proposed build site is located in the south west part of the ground. The existing system is in a East/West orientation which is not recommended and is contrary to the ECB TS6 performance standards and guidance notes. The proposed new system will be installed in a North/South orientation and the exposed area where the existing system currently is will be made into a natural turf area.
