1. The depth of superficial strata and inferred coal seams have not been proven. This should be confirmed during any future ground investigation.
2. The faults are shown to be vertical as the inclination and extent have not been proven during the desk study.

KEY

MPCMF – Middle Pennine Coal Measures Formation
Yd – Yard Coal Seam

Bannock – Bannock Coal Seam
Cu Mn – Cumberland Main Coal Seam

KEY

- Historic Feature
- Infilled Area
- Middle Pennine Coal Measures Formation
- White Haven Sandstone
- Underground Mining
- Geological Fault
- Site Boundary

Descriptions

1. Nearest Historic Mine Shaft
2. Areas of potential 'outcropping' Coal Seam
3. 'Standing Stones' Quarry
