Flood Risk Assessment

We are looking to change the use of land from Agricultural storage to create a storage yard for building materials and aggregates.

Estimated flood level at a height of 600mm.

We are looking to put a 1m high bund around the perimeter of the site with a hedgerow, this will allow protection from flooding and provide screening to the site.

The floor will be loose sand and gravel as found on site to aid natural drainage with no run off.

Please find Environmental Plans and information attached.
