

Heritage Statement

The proposed work has been discussed with the Local Conservation Officer Sammy Woodford.

We will endeavor to maintain the heritage with the materials by attempting to reuse as much of the roof as possible, and where the tiles are too damaged to be reused, we will replace with like for like. The main house panels will be built inset into the roof which provide a more sympathetic view. There will be no exterior cables or pipes.

The proposed work will not be visible from Main Street, and so will have no visual impact on the front exterior perspective. We feel that this work maintains the integrity of the building, and does not in any way detract from the listing requirements, but at the same time makes the building easier to live. There is also no impact on the character of the surrounding area.
