Morning Richard

Whilst I do not agree fundamentally with the proposed outfall I believe that the drainage hierarchy has been considered, United Utilities have agreed in principle the discharge into the combined system at a forward pass rate not to exceed 5L/s for any storm event, with that in mind the proposed outfall to the combined system meets the criteria and the LLFA would welcome the opportunity to view further proposed drainage designs to that effect.

Regards

Michael

Morning Michael,

Did you reach a conclusion to the discussion below? We are hoping to progress with a redesign this week, though need confirmation that the proposed discharged point satisfies the LLFA's requirements before progressing.

We look forward to hearing from you soon.

Kind regards,

Richard Hall

Subject: RE: Flosh Meadows

Morning Richard

Just having a discussion internally as I am currently working in my new role within the team, ultimately when this is submitted to the LPA it will be a different DMO responding so we are in a process of handing over work.

It is beneficial for all concerned that the new DMO is up to speed and understands the process of how we have got to this point.

I should be able to give feedback by the end of the week.

Regards

Michael

Subject: Flosh Meadows

Hi Michael,

Please refer to the enclosed response from UU confirming that a surface water connection to the combined sewer is applicable in this instance. We have followed the planning hierarchy and other than utilising a surface water pump, we have exhausted all options.

We trust that the enclosed is in order and that you can now recommend approval subject to restricting the discharge rate to 5 l/s.

If this is acceptable to the LLFA, we will update our plans and calcs for resubmission.

If you have any queries, please let me know.

Kind regards,

Richard Hall
