Dear Heather,

Thank you for consulting Natural England on the above application. We have reviewed the documentation and provide the following comments:

As construction will be taking place in close proximity to the River Ehen Special Area of Conservation, a Construction Environmental Management Plan (CEMP) will need to be secured through condition to detail the pollution prevention measures that will be implemented during the works. Appropriate pollution prevention guideline measures should include materials and machinery storage, biosecurity, and the control and management of noise, fugitive dust, surface water runoff and waste to protect any surface water drains and the river from sediment, and pollutants such as fuel and cement.

Kind regards, Alex
