

Design & Specification for side screening panel

The louvred side-screen panel has been designed so that at any point between position (B) and (C) on the terrace, it is impossible to view anything, (including the entirety of the neighbour's property) to the right of point (A). The enclosed sample louvre includes an end socket that positions the louvre at a 45° angle. The distance between louvres reduces in the direction (B) to (C).

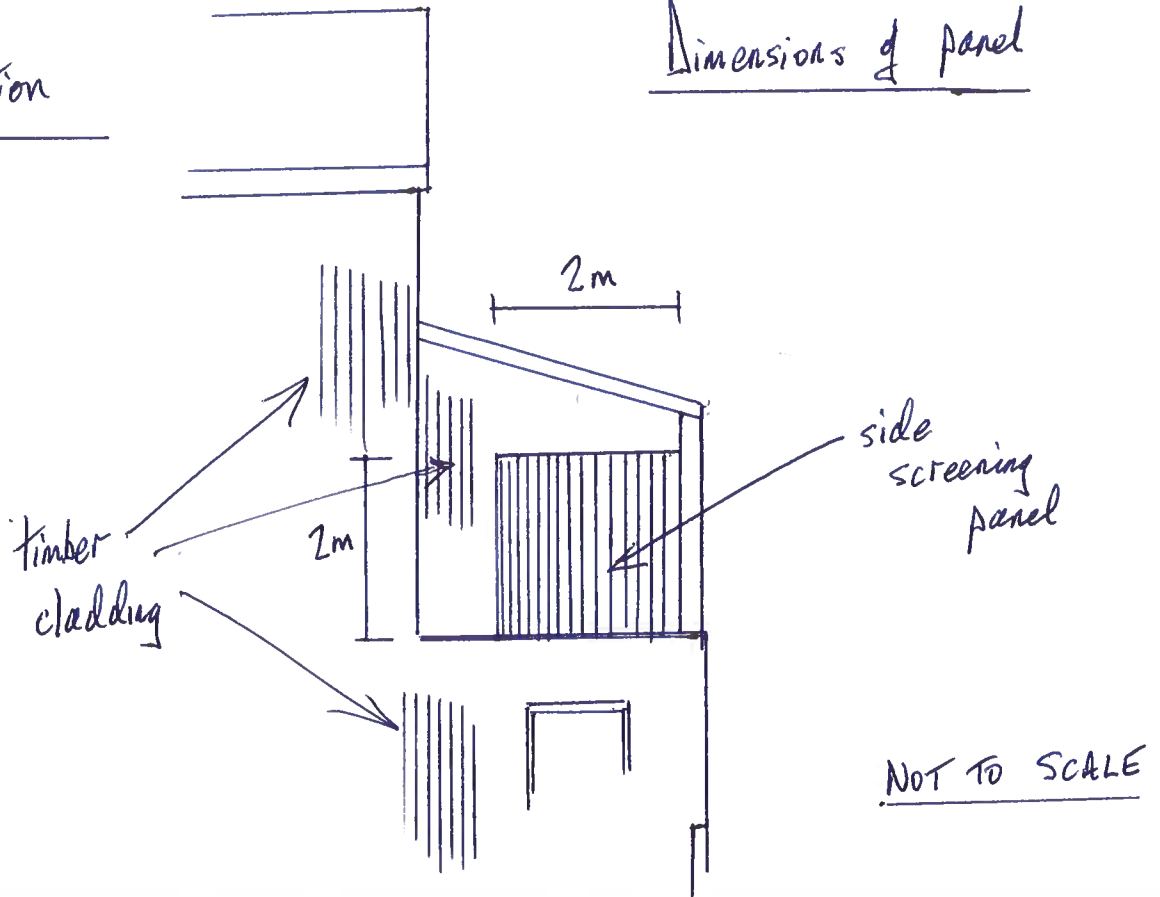

At point (B), louvers are spaced at 95 mm

At point (C), louvers are spaced at 66 mm

Side Elevation

Dimensions of panel

Each individual louvre is permanently fixed into a timber frame, using the end-brackets (as per the sample provided)

Louvres provided in 4m lengths by ~~solar~~
