		By:
		PLC

Design shear strength $f_{v,d} = (f_{v,k} \times k_{mod} \times k_v \times k_{sys}) / \gamma_m$

$$v_{v,k} = 3.2$$

$$k_{mod} = 0.8$$

$$k_v = 1.0$$

$$k_{sys} = 1.0$$

$$f_{v,d} = (3.2 \times 0.8 \times 1.0 \times 1.0) / 1.3 = 1.97 \text{ N/mm}^2$$

\therefore section satisfactory for shear.

Connection to beam

Bolted connection to beam. Bolts acting in tension and compression to resist moment in post

Taking moments about C

$$F_T = 0.66 \times 1.2 / 0.1 = 7.9 \text{ kN}$$

For Axial loaded bolts the capacity is taken as the lower of:

- The bolt tensile capacity
- The load bearing capacity of the washer

Bolt Tensile capacity

Using M8 grade 8.8 bolts

$$\text{Tensile strength } F_{t,Rd} = 21 \text{ kN}$$

Washer Bearing capacity

$$\sigma_{c,90,d} \leq f_{c,90,d}$$

$$f_{c,90,d} = 3.0 f_{c,90,k} = 3.0 \times 2.2 = 6.6 \text{ N/mm}^2$$

$$\text{Area required} = 1.3 \times 7.9 \times 10^3 / 6.6 = 1,556 \text{ mm}^2$$

Use M8 bolts with 50 x 50 x 3 square plate washer
