Safe. Natural. Organic

Imagine a non electric sewage system that was silent, could not break down and could never smell.

Imagine a sewage system that turned your sewage into safe, clean liquid compost that could discharge into a water course or into the soil

Imagine an organic sewage system certified by the UK Government and UK Building Regs.

Eco System

Organic Non Electric Sewage Plant

How Does It Work?

The main reason why the Eco System works so well is due to what is inside it....

Red worms and organisms will break down your sewage like that in a compost heap.

The result is a mineral rich liquid compost that will soak into your soil. This plant food will **feed** and nourish your lawn. Feed and nourish your plants. Feed and nourish your trees. In fact, it will bring your garden back to life.
